

General observations

Chloe works in the Complex Crew Specialist team

Take all of the work away from the schools - leverage it for them

Sometimes, meter readings go through but sometimes they don't

Statement of account not sent - we get an email but we don't see it

Validating invoices: uses a CRM, check the meter readings follow on, contract rates and VAT.

Speaks to the supplier on behalf of schools

1000+ meters 12% of the portfolio

get frequent meter reports every 2 weeks

portal - downloading invoices

Quarterly billing - not a state that they're all produced on - spread out

New portal - LGA needs to be added, problems adding, notifications not received, not getting invoices on time

clients often ask for a re-bill

clients pay direct to SSE

Schools email meter readings to them, either by spreadsheet or through a portal (not all schools use which)

to be able to download statements of account would be a good idea - download into a spreadsheet

Schools email meter readings to them, either by spreadsheet or through a portal (not all schools use which)

Recommend customer to send meter reads at end of each month

Roughly 1000 meter reads per month sent to SSE

Trusts can be under the same account but have different sites

Statement of account - we get an email but we don't see it

if we could bulk upload meter readings that would be good

TPI-Meter-readings-active

Would be good to search by meter name and meter point

Filter by meter reading (tick) would be useful

When they've last paid it really useful

We don't tend to search by postcode

Filter is good by account number or meter point number

Like the idea of being able to send that 'naughty - no thanks'

Send reminder could ping an automated email

They don't share address within the portal

Question over readings made from TPI to email clients coming straight to them

Don't think we have considered email signpost for TPI

Flagging if it's due is useful

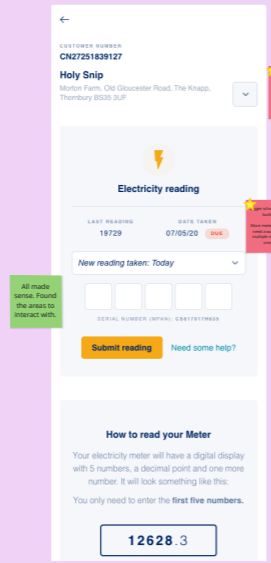

Understand the difference between site and site address - not sure work

TPI-customer-info

Automated reminders - might work - might work - wait for them

TPI-add-a-reading-electricity

All made sense. Found the area to interact with.

Missing multiple sites dropdown

Got it eventually

Would we list out five fields with 3 read numbers?

Question over readings made from TPI to email clients coming straight to them

Don't think we have considered email signpost for TPI

TPI-confirmation-1

The majority do the readings at the same time

If trusts have eg 3 schools under 1 trust, they might send readings on different days.

Trusts - Zen emails trust, trust forwards email to schools

TPI-add-a-reading-gas

Don't use the dropdown feature, to search between sites

If they were on the same account number they would need to change account number

I guess that the dropdown arrow would be different sites

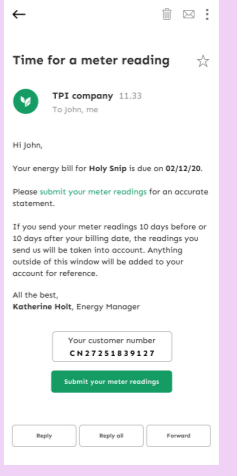

TPI-confirmation-2

This type of feature could be a selling point for clients at the contract phase - being billed accurately is a big win for some

All validation errors - if you've entered a number that's not valid, it will be sent to you. If a meter read was due earlier they'll get the message

Email to TPI client

Sometimes clients send meter readings without the serial number so it can be hard to know what meter reading relates to

What is a meter point? It's the point where the meter is installed. It's the point where the meter is connected to the supply.

Currently send Meter readings in. Back to SSE via email.

They will be able to send meter readings to the end of the month. Back to SSE via email.

Some clients send meter readings. They email it. It's not a problem at all.

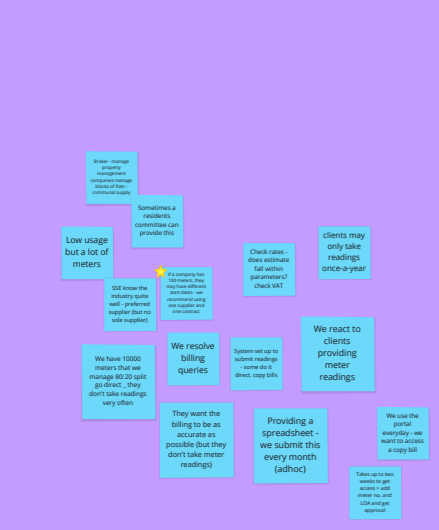

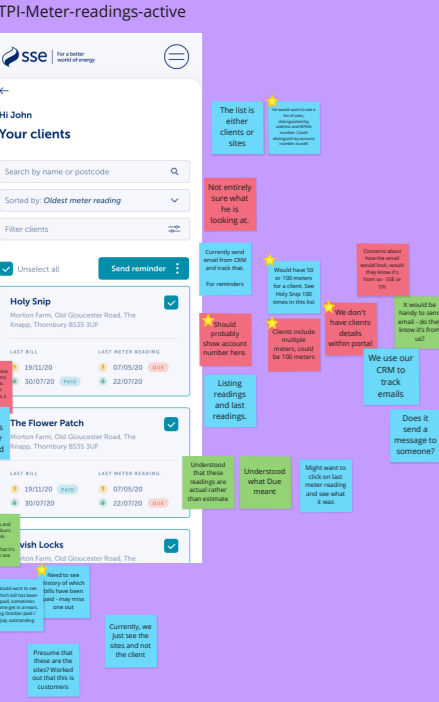

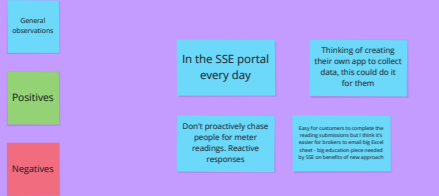

The level of service matters to our customers - we can class this as a selling point - customers get frustrated that meter readings aren't used

Bigger schools can have more than one meter - send a table of meter readings to fit out

It would be really helpful if it was possible to send a table of meter readings to fit out

Would that direct them straight to the portal

General observations

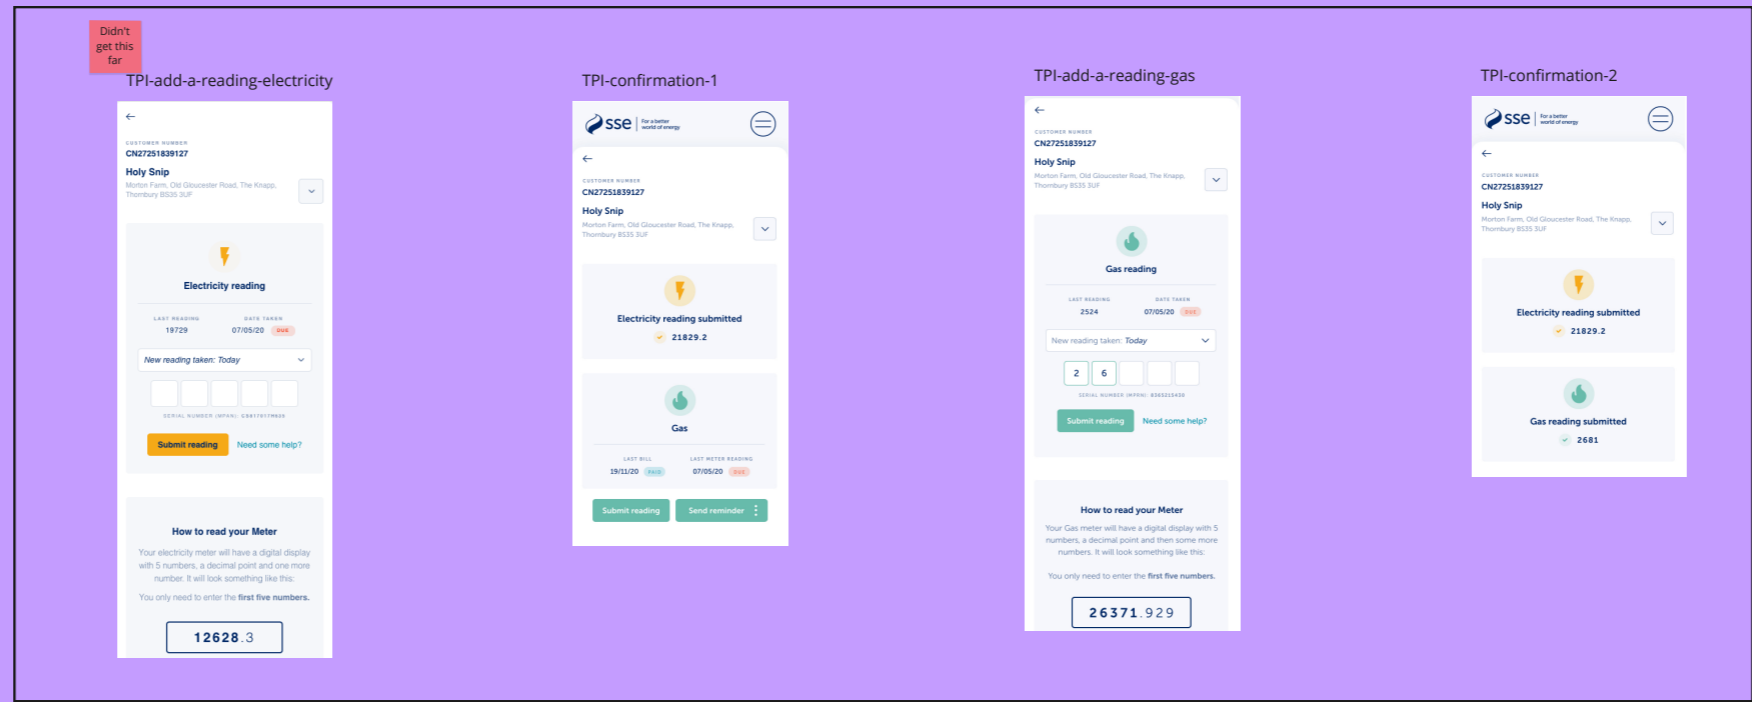

It looks like something I'd use at home

Smaller clients might work better, keep meters to read

Some clients might not want reminders

Automated probably sounds like a bad idea

Didn't get this far

It looks like something I'd use at home

Likes option to add TPI logo

We're considering making an app for meter readings

Might work well with smaller clients

I like that it will encourage clients to get readings

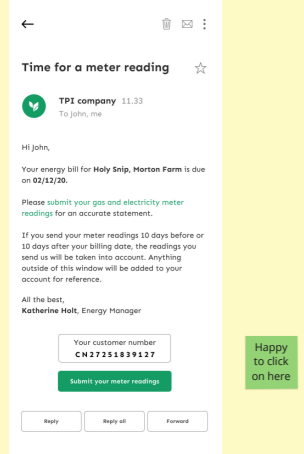

In these responses clients may not work tomorrow

Clients may not act on this

### General observations

### TPI-email

Happy to click on here

### customer-log-in

Noticed customer number pre-filled

The option to cancel or cancel a meter reading is gone. No meter logs

### customer-info

Everyone clicks this - should we change the visibility of this

Noticed both gas and electricity options

### customer-add-a-reading

Used the back arrow

Is this an actual or an estimate?

Notice having the option to cancel a meter reading is gone. No meter logs

Notice customer number pre-filled

Noticed the Due label I wondered what the due button did..

Sometimes sends meter reads from a few days ago

APPA - is that Serial number can change?

Easy to use

Click on number error when the field is that old have

Any other any tags to catch interactions

Site set up with individual account numbers

Would still take a photo anyway to show the meter. Then upload meters on site

When meter is on site, it should be able to read the meter. If not, then you need to go on site

PMs can submit reads there and then

Users submitted readings on the phone. The James Smith phone was used

### customer-confirmation-1

### customer-add-a-reading-gas

### customer-confirmation-2

### customer-confirmation-2b

General observations

Doesn't tell you what site - although Holy Snip is referenced! - Missed it

We've got 9 group accounts with 600 sub-accounts

Do I log in?

What does the dropdown do?

Serial number very small - we know definitely it's the right no

one address can cover 8 blocks = 8 meters

We do enter reading on a different date

Team takes a photo and sends it over

Has this gone in, or passed some sort of check? eg should throw up an error if below last reading

We use the customer number or the MPAN to identify a site

presumably this is due soon otherwise you'll end up with an estimate?

it would be good if the system would auto-populate all the information

There are occasions where you are getting 5 different emails for 5 different sites
